
JUDY DOUGLAS

Executive leadership serving government from all sectors, as well as a track record of commitment and results, prepare me well for IAC leadership. Organizational transformation through collaboration is my hallmark. I drive results with cross-organization communities and partnership – expertise critical to a vibrant IAC.

In my current Executive Committee role I work with Shared Interest Groups to extend IAC's value proposition. SIGs earned increased government engagement and participation and leveraged expertise across an extended community.

I participated on IAC's Transition Study Governing Board to share technology sector insights with the current Administration and was then honored with the Fed 100 President's Award. This project marked an even deeper relationship with government. I also served on a working group to assure IAC's business model remains relevant and robust now and in the future.

As an HP Global Government Industry Executive, I deliver technology and management innovations to fuel performance excellence. I led development of our first e-government offerings through global cross-sector partnerships. Customer collaborations included the Federal CXO Councils' first inter-sector strategic agenda and the Federal Information Technology Resources Board's executive recommendations for government's mission critical programs.

At the Council for Excellence in Government I shaped public-private sector communities to accelerate learning for people serving government, including the Fellows Program, CIO Boot Camp and Women Executives for Government Excellence. While in Federal service I led and redesigned government-wide programs, including Trail Boss, to improve complex technology management and leverage community experience.
